

- b. Plot a graph of each algorithm, average turnaround time vs input size (≠ summarize the performance of each algorithm based on its own graph.

<Insert totally four graphs, one for each program, here>

<Write a summary>

Plot all four graphs on the same graph and compare the performance of algorithms. Rank four scheduling algorithms. Try giving the reasons for

<Insert four-graphs-in-one graph here>

<Write about explaining the results>

- c. Conclude your report with the strength and constraints of your work. A (Note: It is reflection of this project. If you have a change to re-do this what you like to keep and what you like to do differently in order get a results.)

<Write a conclusion about strength and constraints of your work here.>
